OFF SITE BACK UP

**New Version!
Version 9.2**

Granularly backs up and restores in-use Exchange Servers at the sub-folder level and SQL Server at the database level hot and live!

24 hour Operations desk monitoring your data

With our Off Site Backup Service; we mitigate The Risks in Your "What If" Scenarios.

What would you do if there was a massive power outage or a crippling disaster at your business? How much would it cost your business if critical technology or data became inaccessible?

Security:

The Data Center is protected by a low-profile, gated exterior. The outside of the facility is hardened and includes exterior crash barriers. 24-hour manned security stations are located both inside and out at the center. State of the art surveillance includes infrared and video surveillance of the property and the grounds. Inside the facility, individualized access control protects your systems inside the building.

The Data Center provides availability of facility, equipment, and redundant systems on a 24x7 basis. With its "best in class" change control and problem management procedures, our proven and tested infrastructure is available to your business.

Each one of the three Caterpillar Diesel generators can produce 1500 kilowatt of electricity. These generators can provide the electrical needs of the Data Center for 20-30 days. Three on-site, dual-hulled, 10,000-gallon tanks of diesel fuel supply fuel to these generators.

Already doing backups?

You can easily augment your current plan with Off Site Service.
